Data Management System
Project Requirements

Technical Requirements - MVP

Any items marked incomplete in this section will require you to use your one redo to re-submit them. Your app must fulfill the below requirements.

	Complete?
Design unit tests for all app functionality.	
Design and use data objects that are created via a design pattern and inherit from at least one other class.	
Create objects in memory from a saved text file.	
Update the text file to reflect changes to objects.	
Implement at least one Singleton pattern (data manager, logger, etc.).	
Implement at least one Builder or Factory pattern, as appropriate to your objects.	
Create at least three interfaces for your objects to inherit from.	
Create at least two abstract classes for you objects to inherit from.	
There is a runnable JAR file that allows users to download and run the project.	
Allow users to do the following:	
Create complex and custom objects.	
Delete specific objects.	
Find objects based on their properties.	
Update existing objects.	
Close the application.	

Code Convention Requirements

More than two items marked incomplete in this section will require you to use your one redo to re-submit them. If two or fewer items are marked incomplete, the project is considered passing. Your app must fulfill the below requirements.

	Complete?
The files in the app are organized following the conventions demonstrated in lectures.	
The code in the app adheres to coding conventions covered in lessons, like using plural names for arrays.	
The app does not contain dead code, commented-out sections, or console logs.	
The app is appropriately broken down into classes and functions with distinct roles.	
The app can be used without encountering errors, and appropriately uses error handling.	
The app is coded using proper indentation.	

UI/UX Requirements

Any items marked incomplete in this section will require you to use your one redo to re-submit them. Your app must fulfill the below requirements.

	Complete?
The app's menu is easily navigable by a first-time user.	

Git and GitHub Requirements

Any items marked incomplete in this section will require you to use your one redo to re-submit them. Your interactions with Git and GitHub must fulfill the below requirements.

	Complete?
You are shown as the only contributor to the project on GitHub.	
The GitHub repository used for the project must be named appropriately. For example, names like dictionary-application or wellness-tracker are appropriate, whereas ga-project is not. The repo must be publicly accessible. *Be sure to create the repo on your personal GitHub account and ensure it is public.*	
Your repo should have commits that date back to the very beginning of the project. If you start over with a new repo, do not delete the old one.	
Commit messages should be descriptive of the work done in that commit.	

README Requirements

More than two items marked incomplete in this section will require you to use your one redo to re-submit them. If two or fewer items are marked incomplete, the project is considered passing. Your README must contain the items or sections below.

	Complete?
Screenshot/Logo: A screenshot of your app or a logo.	
Your app's name: Include a description of your app and its functionality. Background info about the app and why you built it is a nice touch.	
Getting started: This section should include instructions on how to use your app. It should also contain a link to your planning materials.	
Attributions: This section should include links to any external resources (such as libraries or assets) you used to develop your application that require attribution. You can exclude this section if it does not apply to your application.	

	Technologies used: List the principal technologies used by your application, for example: Java and any major frameworks or libraries.	
	Next steps: Planned future enhancements (stretch goals).	

Presentation Requirements

Any items marked incomplete in this section will require you to use your one redo to re-submit them. Your presentation must fulfill the below requirements.

		Complete?
	Present your project in front of the class on the scheduled presentation day.	
	The project you present is the project you were approved by your instructor to build.	

Summary

Project meets minimum requirements and passes.
